Highly enthusiastic programmer with a wide set of experience in both frontend and backend desgin. Passionate about learning and working with others.

Education

University of Illinois Urbana-Champaign
Bachlors in Computer Science and Statistics

SEPTEMBER 2013 TO SPRING 2016

Completed Classes: Discrete Structures; Data Structures and Algorithms; Computer Architecture; Systems Programming;
Current Classes: Databases; Artificial Intelligence;

Skills

Adept in a multitude of languages(Includes, JavaScript, Node, JQuery, Java, C/C++, PHP, MySQL, AS2, AS3 and Mathimatica);Knowledgeable in Android and WatchApp Development; Adept in Linux systems programming;Well rounded experience in web development;Experienced in graphic design and UI optimization. Extensive experience in databases and backend design.

Projects

MyRightToPlay
myrighttoplay.com

DECEMBER 2010 TO SEPTEMBER 2013

Co-developed a flash portal which dynamically scrapped the best flash games online and rehosted them. It had the ability for users to create their own account gain rewards for playing on our site and suggest games of their preferences. This taught me a great deal on how the web works and inspired me to learn and master CSS, HTML, JS, PHP and MySQL. It also encouraged me to learn elegant UI and optimal database management, because good software should be beautiful inwards and out.

Top 20 Health and Fitness App

MARCH 2014 TO MARCH 2014

Created an WatchApp for the Pebble which is currently to 20 in most loved applications for health and fitness. This project taught me the essentials on how to make a watch app, and how to make a great product with minimal inputs and display.

Loaded

JUNE 2014 TO JULY 2014

http://ajason.me -> Loaded

Programmed a light physics engine from scratch in Android that uses advanced collision detection and dynamic particle effects. I later used this to create Loaded.

Take Out

http://ajason.me -> TakeOut

Hackathon winning Android project that uses Wolframs rest-API along with the Wolfram Cloud to predict how long a person could live if they lived on an unhealthy limited diet. Estimates which organs are likely to fail first along with your chance of survival over time. Worked with a nutritionist to extract a more accurate result. Was a great experience in working with others outside my field.

View My Work

Due to the terse nature of resumes, I could only highlight a fraction of my projects.
Feel free to view my view/fork my work on Github: Saternius
